 HirenPatel15620  Portfolio

Profile

Full-stack software engineer with 3+ years of experience building scalable, production-grade web applications using .NET Core, React (TypeScript), SQL, and Azure DevOps. Experienced in REST API design, CI/CD pipelines, authentication, testing, and performance-focused development. Comfortable working in remote, cross-functional Agile teams with EU and partial global time zone overlap (including IST).

Experience

Software Engineer, Tatvasoft	01/07/2023 – Present
- Designed and developed REST APIs using .Net Core and EF Core for production applications. - Took ownership of backend features from development through testing and CI/CD deployment. - Implemented authentication and authorization using JWT-based security across multiple API modules. - Collaborated with frontend and QA teams to deliver features in Agile sprints. - Improved code quality and reliability by addressing issues reported by SonarQube and adding automated tests.	Ahmedabad, Gujarat, India
Trainee Software Engineer, Tatvasoft	23/01/2023 – 30/06/2023
Collaborated with senior engineers to understand enterprise-level development practices, client requirements, and production standards.	Ahmedabad, Gujarat, India

Education

B.E (Information Communication Technology) Eng.,	07/2019 – 05/2023
Adani institute of Infrastructure Engineering, Gujarat Technological University	Ahmedabad, Gujarat, India
CGPA: 8.4	

Technical Skills

Backend

- .NET 6 / .NET 8, C#
- .NET Core Web API
- Entity Framework Core, LINQ
- Microservices Architecture, RESTful APIs
- OpenID Connect, JWT

Databases

- MS SQL Server
- PostgreSQL

Frontend

- React.js (TypeScript)
- Hooks, State Management
- HTML, CSS
- MUI, Bootstrap

DevOps & Quality

- Azure DevOps CI/CD
- SonarQube, Sentry
- xUnit, React Testing Library
- Git, Jira, Scrum

Key Projects

ISCT v9

The system was designed to manage FX trading operations, including customer onboarding, trade execution, and treasury.

- Developed .NET Core APIs for FX trading and CRM modules using EF Core and SQL Server.
- Implemented multi-currency trade execution and secure role-based access control.
- Deployed services using Azure DevOps pipelines; code samples available on GitHub.

Online Record System

The application was built to manage incident reporting and track nearby community resources to assist users during emergencies.

- Built .Net Core APIs with real-time updates using SignalR.
- Integrated map-based visualization for nearby resources.
- Added audit logging and role-based access control.

Reward Banking System

The system was designed to manage reward points for banking customers, including accrual, redemption, and transaction tracking in a secure and auditable manner.

- Developed .NET Core REST APIs for reward points accrual, redemption, and transaction tracking using EF Core and SQL Server.
- Implemented secure role-based access control to manage customer and admin operations.
- Integrated backend APIs with React UI and deployed services using Azure DevOps CI/CD pipelines.
